APPENDIX

VERSION WITH MARKINGS TO SHOW CHANGES MADE

IN THE SPECIFICATION:

The specification is changed as follows:

Page 1, after the title, insert the heading

BACKGROUND OF THE INVENTION

Page 2, line 6 (according to the line numbering), insert the heading

SUMMARY OF THE INVENTION

Page 5, line 20, insert the heading

BRIEF DESCRIPTION OF THE DRAWINGS

Page 6, before line 1, insert the heading

DETAILED DESCRIPTION OF THE INVENTION

IN THE ABSTRACT OF DISCLOSURE:

The abstract is changed as follows:

Abstract

~~Radio communications system and components for a method of radio transmission by various radio transmission modes~~

A radio communications system ~~is proposed~~and method in which ~~the~~ at least one base station (BS1) also contains a transceiver in order to transmit and receive by various radio transmission

modes (DECT, GSM, UMTS), and in which the ~~at least one~~ base station (BS1) is connected to a ~~control means~~controller (RRM) which determines an availability value for each of the various radio transmission modes (DECT, GSM, UMTS) with the aid of preselectable criteria and controls the base station (BS1) in order to transmit to ~~the~~a wireless subscriber terminal (MT) an identification code at least for the radio transmission mode (DECT) which has the highest availability value. ~~In addition, a method of radio transmission with corresponding features is proposed.~~

~~Owing to the invention proposed, it is achieved that a~~ At least the radio transmission mode (DECT) which has the best instantaneous availability in the coverage area of the base station (BS1)is offered to the subscriber terminal (MT) by the base station (BS1). ~~A control means~~ The controller (RRM) connected to all base stations can carry out this function centrally in order to utilise the radio resources of the entire system, which is preferably designed as multi-standard system.~~, very efficiently. The gradual introduction of new technology, in particular new standards (UMTS), into the radio communications system is possible and is therefore very simple and cost efficient.~~

~~(Fig. 1)~~
